nuBes

nuBes allows the management of EsseCI devices from computers, tablets and smartphones through a smart work environment, usable from a fixed position or on the move, giving the user a unique browsing experience.

User provisioning and management Administrators, services and partners can use the nuBes user management tool to provide and manage user access to web applications or apps such as nuBes dashboard and EyeLan app.

Data and connection security SHA256 encryption with RSA 2048 bit encryption, HTTPS Ethernet connection.

nuBes means:

SMARTNESS: it zeroes the costs of the technological infrastructure related to software updates; it allows the management of data history stored in the cloud or in Qbo terminals.

USABILITY: it is a platform developed to be simple, easy and quick to use.

WIDGETS: it is made of graphic objects that effectively show the layout of your installation.

CLOUD: no matter whether you are in the office, at home or on the go nuBes gives you the ability to accurately manage your installation.

ANALYTICS: better control of your installation thanks to the customized reports and graphics as well as the possibility to view and modify the operating parameters of the thermoregulator.
